

Vaidehi Hirani

AI DEVELOPER | BACKEND DEVELOPER

+91 9429734532 | hiranivaidehi2004@gmail.com | linkedin.com/in/vaidehi-ketankumar-hirani | github.com/Vaidehi1645

PROFESSIONAL SUMMARY

Aspiring AI Developer with hands-on experience in building AI-driven applications and scalable backend systems using Python and modern web technologies.

- Developed AI solutions using LLMs (Whisper, NLP), Computer Vision (OpenCV), and OCR (Google Cloud Vision).
- Built and deployed RESTful APIs and backend systems for real-world, data-driven applications.
- Applied AI with IoT for real-time systems using sensor data processing and GPS-based alerting.

TECHNICAL SKILLS

- Languages: Python, JavaScript, C++
- Web & Frameworks: Node.js, Express.js, React.js, RESTful APIs, LLM Integration
- Tools & Infrastructure: Git, GitHub, Postman, VS Code, Google Cloud APIs, IoT Integration
- Databases: MySQL, MongoDB

PROFESSIONAL EXPERIENCE

Software Developer Intern | Digikentro, Vadodara | Jan 2026 – May 2026

- Improved application reliability by debugging full-stack issues across Angular, .NET, and SQL layers.
- Streamlined backend workflows by analyzing API-to-database data flow and implementing robust error handling.
- Delivered stable, production-ready features with a focus on performance, logging, and system resilience.

EDUCATION

B.Tech in Computer Science & Engineering
(Specialization: Agentic AI)
Navrachana University, Vadodara
2022 – 2026 | CGPA: 6.95/10

ACCOMPLISHMENTS & CERTIFICATIONS

- AWS Academy Graduate – Data Engineering**
- AWS Academy – Machine Learning Foundations**

PROJECTS

AI Fitness & Wellness Coach (AI + Backend | Flask, Gemini)

- Built an AI-powered platform generating personalized workouts and chat-based coaching using Gemini LLM
- Developed backend APIs for logging meals, workouts, and wellness data with real-time AI feedback
- Tech: Python, Flask, Google Gemini, REST APIs, JSON

SIAS – Smart Interview Automation System (AI + CV + NLP)

- Developed an automated interview system using AI-driven evaluation to streamline candidate screening.
- Integrated Whisper and NLTK for speech-to-text processing and structured insight extraction with OpenCV-based session control.
- Tech: Python, FastAPI, OpenCV, Whisper, NLTK, SQLite.

AI Helmet for Accident Detection & Alert System (IoT + Backend)

- Built a real-time accident detection system using sensor fusion for impact analysis
- Implemented automated emergency alerts with live GPS tracking and backend data processing
- Tech: ESP32, Sensors, Firebase, Android Studio, Java, Kotlin
